

Lab 02

Create an empty folder and name it “personal_website” and initialize a git repository in it. As you are doing the following tasks, use git add and git commit commands. Use descriptive git commit messages.

- Create a new file “index.html” in that folder. Add following items in it:
 - Two headings (The headings should have different levels - Use appropriate heading tags)
 - A paragraph about you, with either a use of or a use of tag
 - The tag should be used to indicate strong importance, seriousness, or urgency, like to indicate key phrases in a text for someone skimming it. The tag should be used to represent stress emphasis, like when you'd read the emphasized text in a different tone of voice. Both tags can be used together, where it makes sense.
 - A list of 3 of the courses you are taking (use the appropriate list tag)
 - One of the items on the list must be hyper-linked to the course outline of that course (use absolute URL)

Run "git log --stat", take a screenshot of the output (it should show your commits and the files changed in each commit). Add the screenshot to a folder called "screenshots" in the “personal_website” folder. Make a zip file of your personal_website folder and submit it.
